The graph shows that oil income increased by 45.0 % in October 2016 compared with previous month due to both decreasing of oil output in and price. Total monthly income is still far behind of 2014's summer's monthly income. If the country received only \$ 772 million US in October 2016, but monthly income was \$ 1.76 billion US in June 2014. It confirms that dropped oil price in the world market has dramatically decreased Azerbaijan's revenues.

Note that, gross income implies the currency entering to the country from sale of oil included with AIOC oil revenues. Profit after deducting costs from revenues defined the amount of oil in value. This is sharing in accordance with the production sharing funds between the Government of Azerbaijan and AIOC.
